Female Testosterone and/or Estradiol Pellet Insertion Consent Form

Name: _____ Today's Date: _____
(Last) (First) (Middle)

Bio-identical hormone pellets are concentrated hormones, biologically identical to the hormones you make in your own body prior to menopause. Estrogen and testosterone were made in your ovaries and adrenal gland prior to menopause. Bio-identical hormones have the same effects on your body as your own estrogen and testosterone did when you were younger, without the monthly fluctuations (ups and downs) of menstrual cycles.

Bio-identical hormone pellets are made from yam and are FDA monitored but not approved for female hormonal replacement. The pellet method of hormone replacement has been used in Europe and Canada for many years and by select OB/GYNs in the United States. You will have similar risks as you had prior to menopause, from the effects of estrogen and androgens, given as pellets.

Patients who are pre-menopausal are advised to continue reliable birth control while participating in pellet hormone replacement therapy. Testosterone cannot be given to pregnant women.

My birth control method is: (please circle)

Abstinence Birth control pill Hysterectomy IUD Menopause Tubal ligation Vasectomy Other

CONSENT FOR TREATMENT: I consent to the insertion of testosterone and/or estradiol pellets in my hip. I have been informed that I may experience any of the complications to this procedure as described below. These side effects are similar to those related to traditional testosterone and/or estrogen replacement. **Surgical risks are the same as for any minor medical procedure.**

Side effects may include:

Bleeding, bruising, swelling, infection and pain; extrusion of pellets; hyper sexuality (overactive libido); lack of effect (from lack of absorption); breast tenderness and swelling especially in the first three weeks (estrogen pellets only); increase in hair growth on the face, similar to pre-menopausal patterns; water retention (estrogen only); increased growth of estrogen dependent tumors (endometrial cancer, breast cancer); safety of any of these hormones during pregnancy cannot be guaranteed. Notify your provider if you are pregnant, suspect that you are pregnant or are planning to become pregnant during this therapy, continuous exposure to testosterone during pregnancy may cause genital ambiguity; change in voice (which is reversible); clitoral enlargement (which is reversible). The estradiol dosage that I may receive can aggravate fibroids or polyps, if they exist, and can cause bleeding. Testosterone therapy may increase one's hemoglobin and hematocrit, or thicken one's blood. This problem can be diagnosed with a blood test. Thus, a complete blood count (Hemoglobin and Hematocrit) should be done at least annually. This condition can be reversed simply by donating blood periodically.

BENEFITS OF TESTOSTERONE PELLETS INCLUDE: Increased libido, energy, and sense of well-being. Increased muscle mass and strength and stamina. Decreased frequency and severity of migraine headaches. Decrease in mood swings, anxiety and irritability. Decreased weight. Decrease in risk or severity of diabetes. Decreased risk of heart disease. Decreased risk of Alzheimer's and dementia.

I agree to immediately report to my practitioner's office any adverse reaction or problems that might be related to my therapy. Potential complications have been explained to me and I agree that I have received information regarding those risks, potential complications and benefits, and the nature of bio-identical and other treatments and have had all my questions answered. Furthermore, I have not been promised or guaranteed any specific benefits from the administration of bio-identical therapy. I accept these risks and benefits and I consent to the insertion of hormone pellets under my skin. This consent is ongoing for this and all future insertions.

I understand that payment is due in full at the time of service. I also understand that it is my responsibility to submit a claim to my insurance company for possible reimbursement. I have been advised that most insurance companies do not consider pellet therapy to be a covered benefit and my insurance company may not reimburse me, depending on my coverage. I acknowledge that my provider has no contracts with any insurance company and is not contractually obligated to pre-certify treatment with my insurance company or answer letters of appeal.

Insurance Disclaimer

Preventative medicine and bio-identical hormone replacement is a unique practice and is considered a form of alternative medicine. Even though the physicians and nurses are board certified as Medical Doctors and medical assistants, insurance companies do not recognize it as necessary medicine. It is considered similar to Plastic Surgery (esthetic medicine) and therefore is not covered by health insurance in most cases.

As such the insurers do not provide coverage for, nor reimbursement of expenses associated with our services for Bio-Identical Hormonal therapies.
This includes consultative fees, laboratory fees, medical procedures such as pellet insertions, and medication expense for the hormonal pellets.

Payment is required at the time of service and upon request we will provide a receipt showing the amount paid and the nature of the procedure.

This receipt will serve as evidence of your medical expense.

We will not call, write, attempt any pre-certification, or contact your insurer regarding this therapy.

If we receive inquiry from your insurer we will not respond. Should we receive any funds from your insurer we will return those funds to the sender.

Patients who have access to a Health Savings Account may pay for treatment related charges with that credit or debit card.

By signing this notification, you acknowledge receipt and understanding of this policy.
